

tesa® 66020

200 µm plate mounting tape for corrugated postprint

tesa® 66020 is a blue translucent double-sided tape of 200 µm (8 mil) thickness with a PP backing and an acrylic adhesive. It is especially designed for mounting corrugated printing plates onto polyester carrier films where plates are typically mounted "flat". The tape is first applied to the printing plate, then the liner is removed and the plate is attached to the carrier film.

Adhesive

- High adhesion values and shear resistance for reliable bond, even during long print runs and when the composite is stored for longer periods
- Due to the specially optimized adhesive properties, the tape and plate can be repositioned during mounting

Backing

- Translucent backing makes register marks on carrier film clearly visible

Liner

- The creped liner structure prevents air trapping and tape curling
- Siliconized liner for easy removal

Main Application

Plate mounting of photopolymer plates on polyester carrier films for corrugated board postprint

Technical Data

▪ Backing material	PP film	▪ Type of adhesive	acrylic
▪ Thickness category	200 µm	▪ Type of liner	creped, siliconized PP
